# DUCT HEATERS

Duct heaters go by many names: “Re-Heat Coils”, Slip-In-Heaters”, etc... This is because they typically “slide into” existing ductwork and are used to “re-heat” air within a duct that has traveled long distances.

These heaters are completely custom, please refer to the questions below when requesting a quote for a duct heater.

- |                                       |  |
|---------------------------------------|--|
| 1. How many Kilowatts (KW)?           | 5. AIR FLOW? Vertical or Horizontal?   |
| 2. What line voltage, cycles & phase? | 6. What type of construction?<br>Slip-In (retrofit) or Flange Mount (new const.) |
| 3. How is it controlled?              | 7. Remote panel?   |
| 4. What duct size? W x H              | 8. Would you like a disconnect switch for this heater?                           |
